SEAPORT THREATS AND REQUIREMENTS

Environmental Challenges of Seaport Surveillance

Common Seaport Surveillance Management Requirements

Container Management

Container No. Recognition

- OCR technology recognizes container numbers, avoiding human error and interference
- It facilitates and enhances seaport management efficiency at the gate, yard, quay as well as operations of quay crane and spreader in the loading and unloading zones.

Vehicle Management

License Plate Recognition

- All-in-one camera captures and recognizes the license plate of vehicles accessing seaport (country-specific)
- Drivers can communicate with command center through video intercom in emergencies or to verify identity

Personnel Management

Face Recognition & Access Control

- Face Recognition at the gate records a subject's facial characteristics, entrance time, and place of entrance
- The system will generate an alarm if recognized face is on the blacklist

SEAPORT LAYOUT

BUSINESS UNIT

Gate

- Uses image recognition algorithms to automatically recognize the license plate number
- Capture and recognize container numbers
- Container damage inspection

Face recognition

- Recognizes distinct facial characteristics with intelligent algorithms
- Set blacklist entries and alarms for certain facial characteristics and information (such as name, gender, date of birth, ID number, etc.)
- Track when and where a suspect appeared at a crime scene
- Generate an alarm when a blacklisted face is recognized and help police catch criminals

Shipping Lane

- Multi-lens camera with 180 degree panoramic video displays wide-angle video in real-time
- Seaport shipping lane can be viewed more clearly
- Effectively improve the performance of emergency response command
- Thermal camera can work around-the-clock and in all weather conditions

Berth

- PTZ with corrosion-resistant shell reliably monitors the handling of cargo
- Container No. recognition tracks containers at each point during loading / unloading

Yard

- PTZ camera with explosion-proof technology monitors the yard in real time
- Record container operation and provide images and video as evidence

Perimeter

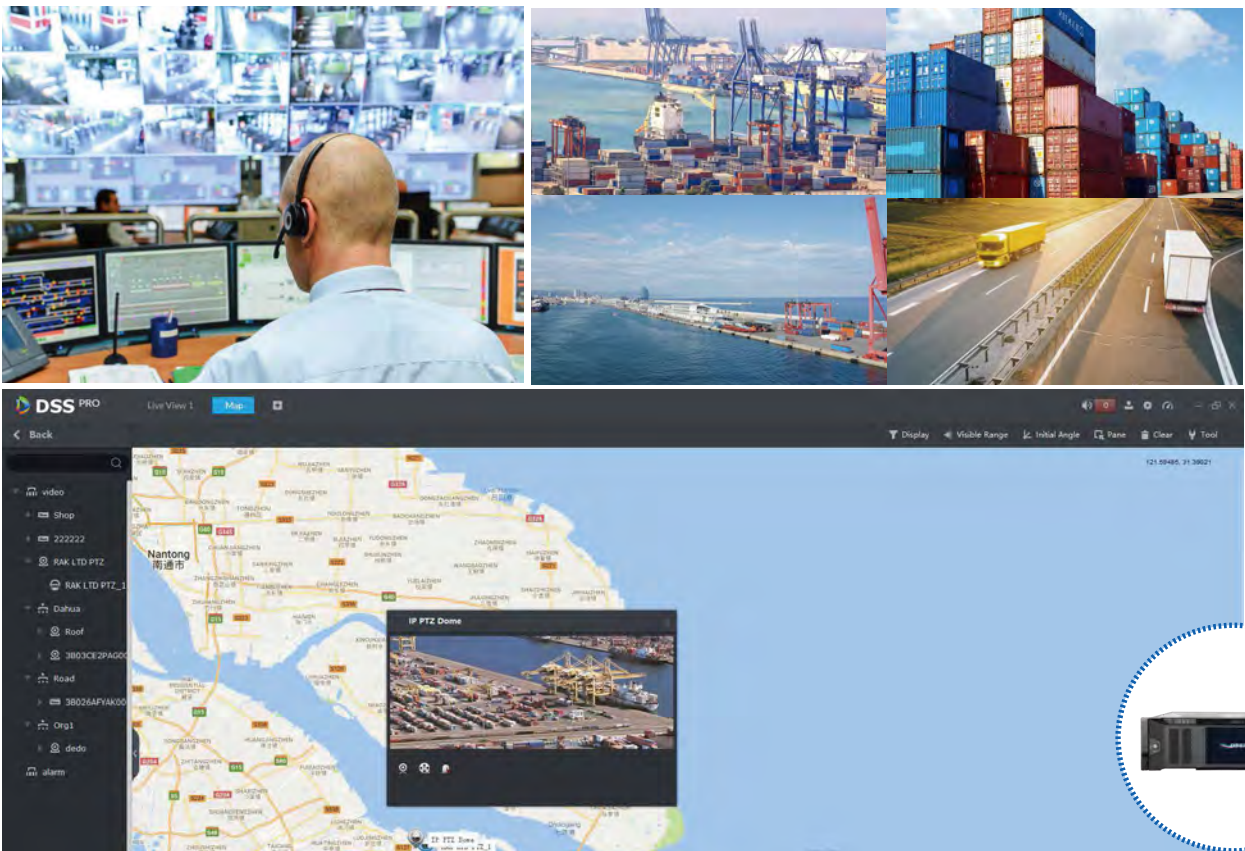

- Configure intelligent intrusion analysis system to automatically detect trespassers and foreign objects
- Alarm is linked to video surveillance and pops up on VMS client
- System displays intruding object and trajectory on video image
- Thermal camera can work around-the-clock and in all weather conditions

Warehouse

- Configure cameras to monitor warehouse operations 24/7
- Cameras equipped with Starlight can record color images in dark environments with brightness as low as 0.006 Lux
- Thermal camera can detect abnormal heat sources to prevent fires

Control Center

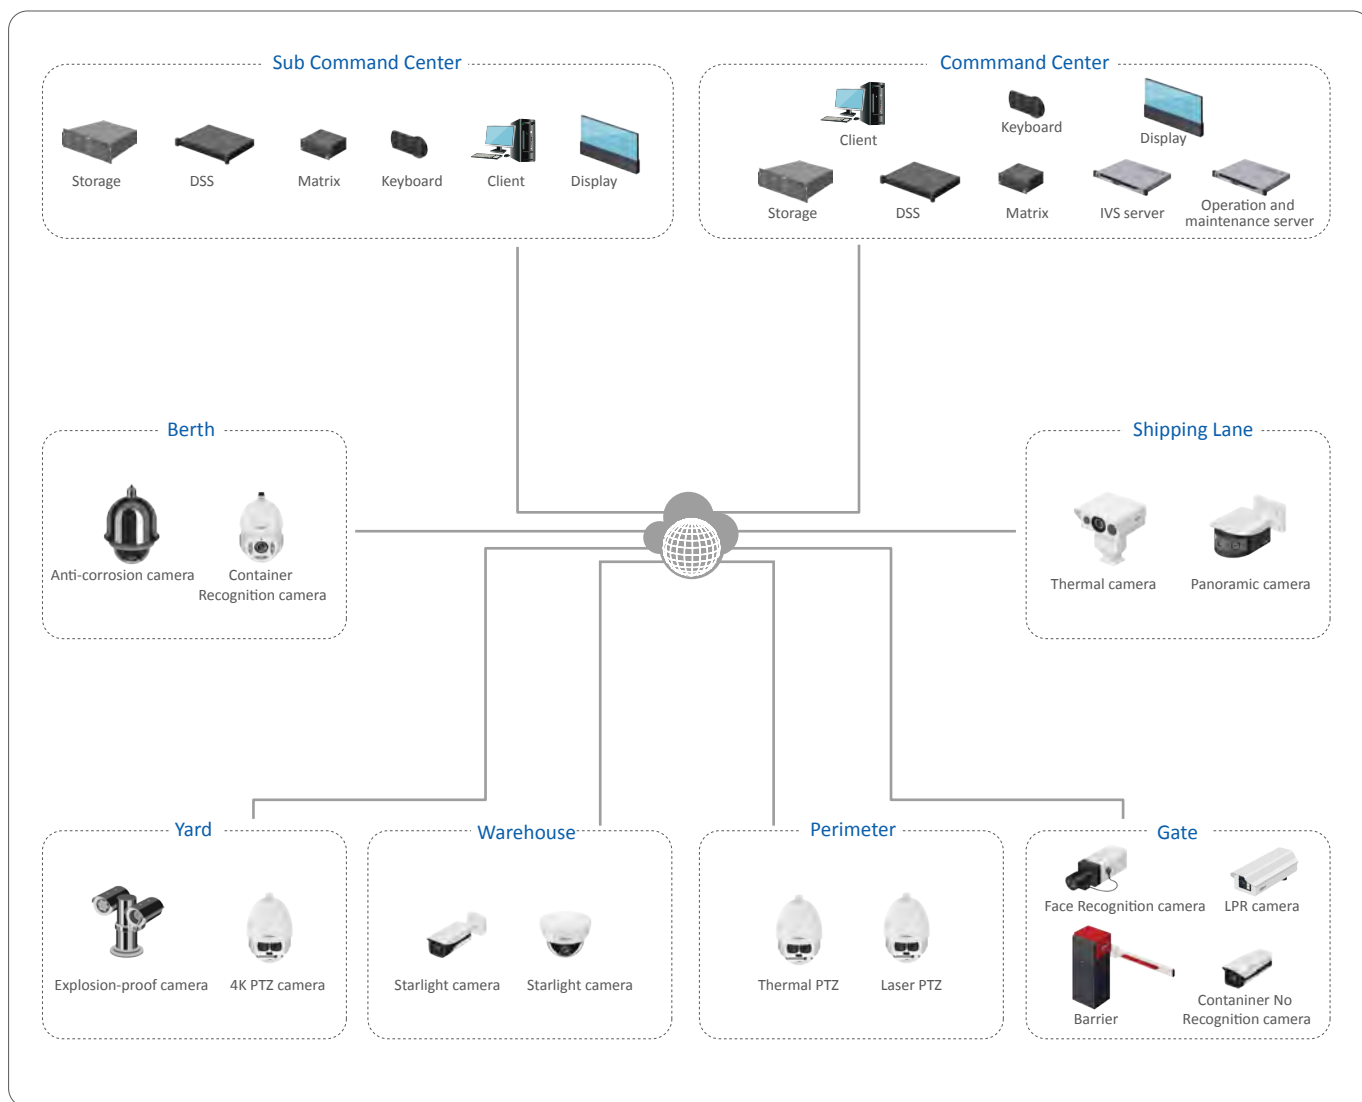

- Display map with satellite cloud images, hydrology and meteorology, weather, wave, tidal, and other image information and port operation information
- Manage all devices including viewing real-time video feed and playback
- Intelligent operation and management system allows centralized management of video surveillance, storage, display, and alarm systems
- Video synopsis displays summary of useful information for records sorted by subject and time
